Claim 17 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 11. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 10, 13, 14, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Isobe.

Isobe discloses a radiator-supporting device 20 readable on the claimed pin. Note inner annular rigid ring 29 and outer rigid ring 30 disclosed as being made of metal (lines 43-48 of column 3). Ring 29 is readable on the claimed "inner layer"; note that it is hollow and is coupled to the header 11. Ring 30 is readable on the claimed "outer layer"; note that it is coupled to the inner ring via the intermediate layer 24 of elastic material.

Regarding claims 3 and 14, this claim recites subject matter concerning the intended use of the device (what fluid might flow through the device in use).

Such limitations cannot distinguish the claimed structure.

Art Unit: 3753

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8, 11, 12, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isobe.

Isobe does not indicate the materials from which metal rings or other heat exchanger components are made. The use of various metals in heat exchanger construction is well known; for the last several decades aluminum has been the predominant material for heat exchanger component construction due to cost, weight savings, resistance to corrosion. In fact, the use of aluminum for forming heat exchanger components is of such notorious character in the art that citation of a reference is deemed unnecessary. *In re Malcolm*, 54 U.S.P.Q. 235. It would have been obvious to one of ordinary skill in the art at the time the instant invention was made to make rings 29, 30 or any other components of the heat exchanger of Isobe out of aluminum.

Claims 4, 6, 7, 9, 15, 18, and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/618,065 Page 4

Art Unit: 3753

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The remaining references of record show various heat exchanger mounting brackets featuring pins (hollow or solid).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allen J. Flanigan whose telephone number is (571) 272-4910. The examiner can normally be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on (571) 272-4930. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
